Explore Your Block: build plan

TEAM EXPLORE YOUR BLOCK · GAMES TRACK · BUILD FOR EVERYONE, WED 21 OCT 2026

The product in one line

One neighborhood outing app that reshapes for whoever is looking: kid spots for kids, hangouts for teens, a full planner for adults, and for a mixed group only the spots that work for everyone, under the youngest person's k-ID rules.

Visual prototype (the reference for every screen): **explore-your-block.vercel.app/prototype.html**
k-ID setup details: **explore-your-block.vercel.app/kid-handoff.html**

How it fits together

```
Browser (React + Vite)
  KidCoreProvider → KidSessionProvider → age gate (k-ID)
     pending  → "Waiting for a grown-up" screen
     pass     → our app screens, fed REAL permissions from k-ID
        Ollie talks        → /api/ollie/speak     (Inworld)
        "What can we do?"  → /api/voice/listen    (Modulate)
        Buy the pack       → FastSpring checkout  → /api/pack/webhook
     claimToken          → /api/kid/claim       (k-ID, secret key)

Vercel (same project): /api/* serverless functions hold every secret key
```

The front end and back end live in one repo and deploy together on Vercel. Secret keys live only in Vercel's environment variables, never in the code or the browser.

Back-end endpoints

ENDPOINT	PARTNER	WHAT IT DOES	SECRET IT NEEDS
`POST /api/kid/claim`	k-ID	Redeems the one-time `claimToken` (valid 10 minutes) at k-ID's `/client/claim`, saves the player's age band and permissions	`KID_SECRET_KEY`
`POST /api/ollie/speak`	Inworld	Text → Ollie's voice (audio); tone changes for kid, teen, adult or group	`INWORLD_API_KEY`
`POST /api/voice/listen`	Modulate	Audio → text + emotion ("sounds excited"); redacts personal details for kids and teens	`MODULATE_API_KEY`
`POST /api/pack/webhook`	FastSpring	Confirms the Family Outing Pack order, then unlocks it for the group	`FASTSPRING_WEBHOOK_SECRET`
`GET /api/spots?members=…`	(ours)	Returns the spots that suit everyone in the group, plus the strictest rules	none

Build order

1. **React app + real k-ID age gate** wrapping the prototype screens. Deploy. This alone is a working demo.
2. **/api/kid/claim** with the secret key; permissions drive every screen.
3. **Ollie's real voice** (Inworld) on "Find something red!" and the group answer.
4. **Voice input** (Modulate) for "What can we all do?"
5. **FastSpring checkout** for the Family Outing Pack (sandbox).

Stop adding features at 3:00 PM. 3:00 to 4:15 is fixing and rehearsing. Submit before 4:30 PM.

Keys: where they go

- Vercel project → Settings → Environment Variables. Add each key there by name (table above).
- For local runs, put them in a `.env.local` file that is listed in `.gitignore`. Never commit it.
- The k-ID **publishable** key is the only key that may appear in front-end code.
- Never paste keys into chat, Discord or the repo.

Who does what

PERSON	OWNS
Michelle	Visual prototype, screens, the demo walkthrough, the React shell around the prototype
Maya	k-ID integration + /api/kid/claim, group logic, deploy, the pitch
Khushi	Inworld voice for Ollie, Modulate voice input, the AI photo check

Open questions for the k-ID helpers

- The full server URL and auth header for redeeming a `claimToken` at `/client/claim` with the secret key.
- Do the US-CA and DE test jurisdictions give the consent ages we expect (13 in California, 16 in Germany)?
- Can a test session be forced to a specific age and country for a live demo?
